

Protecting Patient and Healthcare Provider Data

Detect and Remediate Attacks with LogRhythm NextGen SIEM Platform

As the proliferation of patient and provider data continues to grow, your organization faces the task of continuously protecting that information and keeping it secure. With a growing cyberattack landscape and new technologies that transfer, process, store, and interact with patient data, LogRhythm helps you stay on top of patient data safety while quickly navigating threats and intrusions across endpoints.

The [LogRhythm NextGen SIEM Platform](#) provides the visibility and tools to quickly detect threats and keep patient and provider data, biomedical devices, and healthcare systems secure.

Monitoring the Network – Not Just Data

LogRhythm’s Network Analysis and Visibility (NAV) solution, [NetMon](#), offers real-time visibility and security analytics down to the application layer. NetMon provides network context to secure an environment by profiling devices, users, and activities, and helps detect and respond to threats.

Scalability and Reliability for Years to Come

LogRhythm’s [True Unlimited Data Plan](#) ensures one investment to protect all data, users and systems, even if those numbers increase year to year.

Simplify and Demonstrate Health Insurance Portability and Accountability Act Compliance

LogRhythm is experienced in helping healthcare organizations address their security concerns. Healthcare security teams rely on LogRhythm solutions to:

- **Improve detection, mitigation and response capabilities** with the all-in-one LogRhythm NextGen SIEM Platform that includes Security Orchestration, Automation and Response (SOAR), User Entity Behavior Analytics (UEBA), and Network Detection and Response (NDR)
- **Maximize patient data protection by integrating** with electronic health record systems such as Epic, eClinicalWorks, Cerner, and AllScripts
- **Demonstrate HIPAA and HITRUST compliance** with fact-based evidence easily accessed and exported for audit reports
- **Reduce time and the cost** of compliance with prepackaged content developed and continually updated by LogRhythm Lab
- **Obtain real-time visibility** into events with LogRhythm’s preconfigured alarms, reports, rules, and dashboards
- **Bridge technology** including IT, IS, and OT that support the healthcare business with systems and infrastructure that enable the industry

LogRhythm NextGen SIEM Platform Features and Benefits for Healthcare

Smart Security	<ul style="list-style-type: none">• Flag weaknesses in authorizations that could put hospital and laboratory management systems and patient data at risk• Save time and effort in complying with HIPAA and HITECH using the Health Care Compliance Automation Module• Detect malicious activity and meet compliance regulations using DetectX's prebuilt security analytics content and visualizations• Discover and identify devices on the network to help determine normal states for different device types and manufacturers with LogRhythm's integration with MedScan and Ordr• Protect data on disconnected devices with Passive network monitoring• Identify suspicious activity with EHR system alerts and alarms• Use customizable and flexible dashboard visualizations to fit IT environment and policies
Automation to Reduce SOC Team Effort	<ul style="list-style-type: none">• Streamline workflows to help security teams combat evolving threats using RespondX (SOAR) features, including case management, case metrics, playbooks, and contextualization• Gain real-time visibility to understand what's occurring in your environment• Reduce manual security tasks and platform switching with SmartResponse™ automation• Enrich data with contextual details and translate obscure log syntaxes to a consistent and predictable structure with AnalytiX• Eliminate time spent writing scripts, building rules, and creating reports with automation• Manage specific threats and reduce time to detect and respond to threats with repeatable processes and guides• Document evidence of compliance with predefined reports
Threat Intelligence	<ul style="list-style-type: none">• Comprehend "normal" in IT and operational technology (OT) to help detect behavioral anomalies that might indicate an attack in progress• Access a library of prebuilt compliance, threat, and operational risk-based content• Obtain continuously updated data processing content and threat scenarios• Identify malicious activity, detect advanced threats, and protect systems from application vulnerabilities
Integrations	<ul style="list-style-type: none">• Accelerate medical device and system data monitoring with seamless integrations with top providers:<ul style="list-style-type: none">• Medical Device integrations: Ordr and MedScan• Healthcare software system integrations: AllScripts, Cerner, eClinical Works, Epic• Simplify deployment and maintenance with fully tested and certified prebuilt integrations• Aggregate information from physical, virtual, and cloud sources using a flexible data collection• Protect EHR with real-time visibility• Integrate with existing EHR software, and map prebuilt AI Engine rules and alerts to HIPAA and HITECH controls
