Are you struggling to keep up with the rapidly evolving threat landscape? Many IT leaders are increasing investment in solutions that automate threat detection, and streamline response and neutralization. LogRhythm is an award-winning Security Intelligence and Analytics Platform that unifies next-gen SIEM and log management, along with network forensics, endpoint monitoring, and security analytics. It detects threats by analyzing data from across the IT ecosystem and arms your analysts to respond and neutralize them quickly to help your security team end attacks before they result in a data breach. With LogRhythm in place, you have the necessary tools to keep your ecosystem safe, comply with regulatory requirements and make the most of your security team’s valuable time.

**Rapid Time to Value**
Whether you are protecting a small business network or running a global security operations center (SOC), we recognize the importance of time to value and total cost of ownership. LogRhythm’s integrated architecture continues to be recognized with third-party awards and accolades for its ease of deployment and use, allowing customers to rapidly benefit from their investment in enterprise threat detection, incident response enablement, compliance automation and operational visibility.

**Easy to Use, Deploy and Maintain**
- Simplify implementation and ongoing management with a unified solution for security intelligence and analytics
- Empower your valuable personnel to focus on protecting your organization, rather than customizing and integrating tools
- Minimize scaling costs with a building block architecture to support future growth

**Powered by LogRhythm Labs**
- Quickly align business objectives using prepackaged content created by LogRhythm Labs
- Automatically extract metadata and classify security events from over 750 different data sources, including operating systems, applications and devices
- Integrate threat context from internal honeypots and commercial and open-source threat feeds
- Automate and enforce compliance with PCI DSS, SOX, HIPAA, FISMA, ISO 27001, NERC CIP and other frameworks

**Threat Detection**
- Detect suspicious behavior through multi-dimensional analysis of data from across the entire corporate ecosystem
- Rapidly implement specific use cases with security analytics modules that leverage advanced algorithms (e.g., behavioral, statistical, correlative)
- Protect your organization from threats targeting your users, networks and endpoints

**Incident Response & Orchestration**
- Provide centralized access to data from across your IT environment
- Search massive data sets with unprecedented speed and precision using unstructured or contextual search, or search with both unstructured and contextual criteria together
- Orchestrate and automate incident response using LogRhythm’s collaborative case management workflows
- Automate incident investigation and remediation with pre-staged SmartResponse™ automation actions

**Industry Accolades**

LogRhythm has given us a system-wide awareness of events that has helped us to better understand how our environment operates. It has been extremely easy for us to not only implement LogRhythm, but also extend the solution for a number of other monitoring challenges. LogRhythm has been the best investment we have made in the last 5 years.
